PROFESSIONAL SUMMARY

Data Engineer with 2+ years of experience at L'Oréal Russia & Kazakhstan, specialising in ETL pipeline development, data warehouse architecture, and data quality initiatives. Hands-on expertise across MS SQL Server, Informatica PowerCenter, SAP BW, and SSAS Tabular. Currently pursuing a Master's degree in Information Systems while working full-time. Long-term career focus on data architecture, with a target transition into fintech.

WORK EXPERIENCE

Data Engineer

L'Oréal Russia & Kazakhstan | 2025 – Present | Moscow, Russia

- Design and maintain ETL pipelines in Informatica PowerCenter, integrating source systems with the corporate data warehouse (MS SQL Server + SAP BW)
- Develop and support data models for SSAS Tabular and OLAP cubes; optimise query performance using DAX Studio and VertiPaq analysis
- Designed a data quality volume-tracking system in MS SQL Server to monitor record counts at three pipeline checkpoints, enabling rapid root-cause analysis for load discrepancies
- Built a goods-movement enrichment pipeline (TPS system) joining transactional data with a pricing reference to add monetary values — documented with DQ checks, historization strategy, and reload logic
- Created structured Confluence templates and a knowledge base to capture internal processes and reduce knowledge silos across the team

Data Engineering Intern

L'Oréal Russia & Kazakhstan | 2024 – 2025 | Moscow, Russia

- Supported the data team in ETL development and pipeline maintenance using Informatica PowerCenter
- Assisted with SQL Server and SAP BW data model documentation and data quality analysis

KEY PROJECTS

TPS Goods-Movement Enrichment

- Joined goods-movement files from the TPS system with a BA team's Excel pricing reference to add monetary amounts to each record
- Delivered full Confluence documentation: enrichment algorithm, DQ checks matrix, historization strategy, and reload logic

Data Quality Volume Monitoring

- Designed a volume-tracking table in MS SQL Server capturing record counts at receipt, ETL output, and SAP BW load stages
- Enabled faster incident diagnosis for load discrepancies — first data quality initiative on the team

SSAS Tabular Performance Analysis

- Investigated VertiPaq internals and MaxParallelism tuning; benchmarked star vs. snowflake schema performance for SSAS tabular models
